

Environmental Sustainability Policy

for the

Luis Muñoz Marín International Airport (SJU)

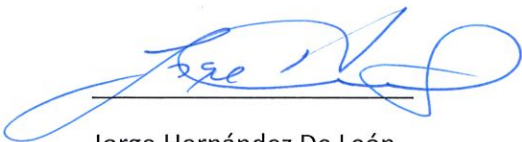

Aerostar Airport Holdings, LLC (Aerostar), as operator of the Luis Muñoz Marín International Airport (SJU), is committed to grow its traffic and develop SJU while striving to minimize adverse environmental impacts, reduce our carbon footprint where possible, and envision strategies to promote the conservation of Puerto Rico's natural resources.

It is Aerostar's policy to operate in a way that is compatible and balanced with the environment, and to undertake continuous efforts to reduce the impact that its operations have on the balance of ecosystems. Aerostar will ensure compliance with applicable environmental laws and regulations, thus managing SJU airport operations with the aim of:

- Expeditiously responding to incidents and associated risks that might have a harmful impact on the environment, all while promoting a culture of safety and security at SJU in order to avoid potential environmental damages;
- Adequately managing emissions, effluents and the generation of solid waste as a result of SJU operations;
- Implementing feasible measures to reduce the consumption of energy and water within its facilities;
- Taking steps to reduce or compensate for greenhouse gas emissions due to the direct and indirect activities under the control of Aerostar; and
- Adopting strategies and establishing partnerships to mitigate the effects of our operations on the environment.

To these ends, Aerostar will carry out the appropriate inspections and assessments of the activities that have an effect on the environment, proactively measure their development, and develop mechanisms or adopt new strategies that counteract these effects. Aerostar is also committed to respond in a timely and proactive manner in addressing incidents that occur as a result of SJU operations, as well as adapt, minimize or mitigate impacts associated to climate change.

Aerostar will encourage respect for the environment both inside and outside the company. Among its employees it will promote environmental awareness and a general culture of sustainability. Aerostar will also take advantage of opportunities that may arise to promote, provide guidance, and influence a culture of sustainability among suppliers, concessionaires, contractors, other business partners, and SJU community in general.
